Web Setting Template Tool Overview

Sales pitch

WSStt requires NO WebFacing education and NO Code Designer/LPEX education and NO HTML/JavaScript education.

WSStt gives your application WEB/GUI navigation capabilities by applying web settings in a rapid, simplified manner.

What does it do

WSStt inserts WebFacing Web Settings globally into your application display files using a template. Ease-of-use screens, allows a green screen developer to accelerate the field by field effort required to insert web settings using Code Designer or LPEX. This will reduce the customization effort dramatically.

Sample Configuration

Hardware. . . IBM System i5 – 520/9406 1000cpw 4gig memory
 IBM Desktop - Pentium 4 2.4gh 1gb ram

Software. . . .IBM WDSCi AE v6.0.1

Application. . AppSphere ERP application
 Display File Members – 1300
 Record formats – 8740
 Web settings – 16,000

WSStt Example

No WebFacing education
 No Code Designer/LPEX education
 No HTML/JavaScript education

Create **WSStt** template (one time only) – 5 minutes (300 seconds)
 Build a global rule – 5 minutes x 3 rules = 15 minutes (900 seconds)
 Build global a web setting – 10 seconds x 3 different web settings = 30 seconds
 Apply template to DDS – 10 minutes (600 seconds)
 16,000 web settings = 300 + 900 + 30 + 600 = 1830 seconds
 1830 seconds / 16,000 web settings = .02 seconds per web setting (2/10th of a second per web setting).

Code Designer/LPEX Example

Need WebFacing education - ???

Need Code Designer education - ???

Need HTML/JavaScript education - ???

Create WebFacing Project – 5 minutes (300 seconds)

Open member – 90 seconds average x 8740 = 786,600 seconds

Add one web settings to one field – 20 seconds

16,000 web settings x 20 seconds = 320,000 seconds

16,000 web settings = 786,600 + 320,000 = 1,106,000 seconds

$1,106,000 / 16,000 = 69$ seconds per web setting

WStt = .02 seconds per web setting vs. **Code Designer/LPEX** = 69.0 seconds per web setting.

Why would your company use WStt

- Companies new to WebFacing and want to drastically cut time and costs associated with creating and maintaining web settings for web navigation.
- Applications developed using code generators that remove web settings and have a need to automatically reinsert the deleted web settings.
- Companies who have third party software, not WebFaced, and need to automatically reapply web settings to new releases.
- Companies/Business partners who need to maintain web settings for different versions of their software, new releases and their customer's custom code.

Web Setting Template Tool

Web Setting Template Tool Services Offering
